

## Chapter 13 / Example 7

# Calculating probabilities

Trains at a busy railway station are occasionally cancelled due to staff shortages, breakdowns, a lack of available trains and many other causes. Assume that there are on average 2.31 cancelled trains per day and that the number of cancelled trains  $C$  can be modelled by  $C \sim \text{Po}(2.31)$ .

- Find the probability that there will be 4 or more cancellations on a given day.
- Find the probability that there will be at least 81 cancellations in the month of March.
- Find, in two different ways, the probability that there are no cancellations in a working week of five days.
- In a working week of five days, find the probability that there will be 4 or more cancellations on exactly 3 of these days.

$C \sim \text{Po}(2.31)$ . Find  $P(C \geq 4)$ .

Press **MENU** 2 **STAT** to display the List Editor screen.

Press **F5** DIST **F6**  $\triangleright$  **F1** POISSON **F2** Pcd.

Choose **F2** Var.

Enter 4 as Lower and 100 as Upper and 2.31 as  $\lambda$ .

100 is a large value of  $C$  used in place of  $\infty$ .

Choose **F1** None for Save Res.

```
Poisson C.D
Data      :Variable
Lower     :4
Upper     :100
λ         :2.31
Save Res:None
Execute
[None] LIST
```

Navigate down to Execute and press **EXE**.

The GDC displays the solution  $P(C \geq 4) = 0.203$ .

```
Poisson C.D
p=0.2026891
```

$M \sim \text{Po}(71.61)$ . Find  $P(M \geq 81)$ .

Press **EXIT** to display the Poisson CD template.

Enter 81 as Lower and 1000 as Upper and 71.61 as  $\lambda$ .

1000 is a large value of  $C$  used in place of  $\infty$ .

Choose **F1** None for Save Res.

```
Poisson C.D
Data      :Variable
Lower     :81
Upper     :1000
λ         :71.61
Save Res:None
Execute
[None] LIST
```

Navigate down to Execute and press **EXE**.

The GDC displays the solution  $P(M \geq 81) = 0.147$ .

```
Poisson C.D
p=0.14704342
```

## Chapter 13 / Example 7

# Calculating probabilities

$C \sim Po(2.31)$ . Find  $(P(C = 0))^5$ .

Press **EXIT** twice to display the List Editor screen.

Press **F5** DIST **F6**  $\triangleright$  **F1** POISSON **F1** Ppd.

Choose **F2** Var.

Enter 0 as the value of x and 2.31 as  $\lambda$ .

Choose **F2** List for Save Res, type 1 and press **EXE**.

```
Poisson P.D
Data :Variable
x :0
λ :2.31
Save Res:List1
Execute
[None] LIST
```

Navigate down to Execute and press **EXE**.

The GDC displays the solution  $P(C = 0) = 0.0993$ .

```
Poisson P.D
p=0.09926125
```

Press **MENU** 1 **RUN-MAT** to display the Run-Matrix screen for arithmetical calculations.

Press **OPTN** **F1** LIST **F1** List and type 1.

Type  $\wedge 5$ .

The GDC displays the solution  $(P(C = 0))^5 = 0.00000964$ .

```
List 1^5
{9.636043104x10^-6}
[ ]
List [Lst→Mat] Dim Fill( Seq [ ] >
```

$W \sim Po(11.55)$ . Find  $P(W = 0)$ .

Press **MENU** 2 **STAT** to display the List Editor screen.

Press **F5** DIST **F6**  $\triangleright$  **F1** POISSON **F1** Ppd.

Choose **F2** Var.

Enter 0 as the value of x and 11.55 as  $\lambda$ .

Choose **F1** None for Save Res.

```
Poisson P.D
Data :Variable
x :0
λ :11.55
Save Res:None
Execute
[None] LIST
```

Navigate down to Execute and press **EXE**.

The GDC displays the solution  $P(W = 0) = 0.00000964$ .

```
Poisson P.D
p=9.636x10^-6
```

## Chapter 13 / Example 7

# Calculating probabilities

$D \sim B(5, 0.203)$ . Find  $P(D = 3)$ .

Press **EXIT** twice to display the List Editor screen.

Press **F5** DIST **F5** BINOMIAL **F1** Bpd.

Choose **F2** Var.

Enter 3 as the value of x, 5 as Numtrial and 0.203 as p.

Choose **F1** None for Save Res.

```
Binomial P.D
Data      :Variable
x         :3
Numtrial :5
p         :0.203
Save Res:None
Execute
[None] [LIST]
```

Navigate down to Execute and press **EXE**.

$P(D = 3) = 0.0531$ .

```
Binomial P.D
p=0.05313794
```
