

Syllabus overview

This book covers the whole syllabus for the DP Mathematics: applications and interpretation HL course. Here is an overview of the syllabus content covered in each chapter.

1 Measuring space: accuracy and geometry

Syllabus reference	Syllabus content
SL1.5*	Laws of exponents with integer exponents. Introduction to logarithms with base 10 and e. Numerical evaluation of logarithms using technology.
SL1.1*	Introduction to logarithms with base 10 and e. Numerical evaluation of logarithms using technology.
SL1.6	Approximation: decimal places, significant figures. Upper and lower bounds of rounded numbers. Percentage errors. Estimation.
SL3.1*	The distance between two points in three-dimensional space, and their midpoint. Volume and surface area of three-dimensional solids including right-pyramid, right cone, sphere, hemisphere and combinations of these solids. The size of an angle between two intersecting lines or between a line and a plane.
SL3.2*	Use of sine, cosine and tangent ratios to find the sides and angles of right-angled triangles. The sine rule: $\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$. The cosine rule $c^2 = a^2 + b^2 - 2ab \cos C$; $\cos A = \frac{b^2 + c^2 - a^2}{2bc}$. Area of a triangle as $\frac{1}{2}ab \sin C$.
SL3.3*	Applications of right and non-right-angled trigonometry, including Pythagoras theorem. Angles of elevation and depression. Construction of labelled diagrams from written statements.
SL3.4	The circle: length of an arc; area of a sector.
AHL1.10	Simplifying expressions, both numerically and algebraically, involving rational exponents.

AHL3.8	<p>The definitions of $\cos \theta$ and $\sin \theta$ in terms of the unit circle.</p> <p>The Pythagorean identity: $\cos^2 \theta + \sin^2 \theta = 1$</p> <p>Definition of $\tan \theta$ as $\frac{\sin \theta}{\cos \theta}$</p> <p>Extension of the sine rule to the ambiguous case.</p> <p>Graphical methods of solving trigonometric equations in a finite interval.</p>
--------	---

**Shows content that is common to both the Mathematics: analysis and approaches and the Mathematics: applications and interpretation courses.*

2 Representing and describing data: descriptive statistics

Syllabus reference	Syllabus content
SL1.2*	<p>Arithmetic sequences and series.</p> <p>Use of the formulae for the nth term and the sum of the first n terms of the sequence.</p> <p>Use of sigma notation for sums of arithmetic sequences.</p> <p>Applications.</p> <p>Analysis, interpretation and prediction where a model is not perfectly arithmetic in real-life.</p>
SL4.1*	<p>Concepts of population, sample, random sample, discrete and continuous data.</p> <p>Reliability of data sources and bias in sampling.</p> <p>Interpretation of outliers.</p> <p>Sampling techniques and their effectiveness.</p>
SL4.2*	<p>Presentation of data (discrete and continuous): frequency distributions (tables).</p> <p>Histograms.</p> <p>Cumulative frequency; cumulative frequency graphs; use to find median, quartiles, percentiles, range and interquartile range (IQR).</p> <p>Production and understanding of box and whisker diagrams.</p>
SL4.3*	<p>Measures of central tendency (mean, median and mode).</p> <p>Estimation of mean from grouped data.</p> <p>Modal class.</p> <p>Measures of dispersion (interquartile range, standard deviation and variance).</p> <p>Effect of constant changes on the original data.</p> <p>Quartiles of discrete data.</p>
SL4.4*	<p>Linear correlation of bivariate data.</p> <p>Pearson's product-moment correlation coefficient, r.</p> <p>Scatter diagrams; lines of best fit, by eye, passing through the mean point.</p> <p>Equation of the regression line of y on x.</p> <p>Use of the equation of the regression line for prediction purposes.</p> <p>Interpret the meaning of the parameters, a and b, in a linear regression $y = ax + b$.</p>

**Shows content that is common to both the Mathematics: analysis and approaches and the Mathematics: applications and interpretation courses.*

3 Dividing up space: coordinate geometry, lines, Voronoi diagrams, vectors

Syllabus reference	Syllabus content
SL2.1*	<p>Different forms of the equation of a straight line.</p> <p>Gradient; intercepts</p> <p>Lines with gradients, m_1 and m_2</p> <p>Parallel lines $m_1 = m_2$</p> <p>Perpendicular lines, $m_1 \times m_2 = -1$</p>
SL2.3*	<p>The graph of a function; its equation $y = f(x)$.</p> <p>Creating a sketch from information given or a context, including transferring a graph from screen to paper.</p> <p>Using technology to graph functions including their sums and differences.</p>
SL2.4*	<p>Determine key features of graphs.</p> <p>Finding the point of intersection of two curves or lines using technology.</p>
SL3.1*	<p>The distance between two points in three-dimensional space, and their midpoint.</p> <p>Volume and surface area of three-dimensional solids including right-pyramid, right cone, sphere, hemisphere and combinations of these solids.</p> <p>The size of an angle between two intersecting lines or between a line and a plane.</p>
SL3.5	Equations of perpendicular bisectors.
SL3.6	<p>Voronoi diagrams; sites, vertices, edges, cells.</p> <p>Addition of a site to an existing Voronoi diagram.</p> <p>Nearest neighbour interpolation.</p> <p>Applications of 'the toxic waste dump' problem.</p>
AHL3.10	<p>Concept of a vector and a scalar.</p> <p>Representation of vectors using directed line segments.</p> <p>Unit vectors; base vectors i, j, k.</p> <p>Components of a vector; column representation: $v = \begin{pmatrix} v_1 \\ v_2 \\ v_3 \end{pmatrix} = v_1 i + v_2 j + v_3 k$.</p> <p>The zero vector 0, the vector $-v$.</p> <p>Position vectors $\vec{OA} = a$</p> $\vec{AB} = \vec{OB} - \vec{OA} = b - a$ <p>Rescaling and normalizing vectors.</p>
AHL3.11	Vector equation of a line in two and three dimensions:

	$\mathbf{r} = \mathbf{a} + \lambda \mathbf{b}$, where \mathbf{b} is a direction vector of the line.
AHL3.12	<p>Vector applications to kinematics.</p> <p>Modelling linear motion with constant velocity in two and three dimensions.</p> <p>Motion with variable velocity in two dimensions.</p>
AHL3.13	<p>Definition and calculation of the scalar product of two vectors.</p> <p>The angle between two vectors; the acute angle between two lines.</p> <p>Definition and calculation of the vector product of two vectors.</p> <p>Geometric interpretation of $\mathbf{v} \times \mathbf{w}$.</p> <p>Components of vectors.</p>

**Shows content that is common to both the Mathematics: analysis and approaches and the Mathematics: applications and interpretation courses.*

4 Modelling constant rates of change: linear functions and regressions

Syllabus reference	Syllabus content
SL2.2*	<p>Concept of a function, domain, range and graph.</p> <p>Function notation, eg $f(x), v(t), C(n)$</p> <p>The concept of a function as a mathematical model.</p> <p>Informal concept that an inverse function reverses or undoes the effect of a function.</p> <p>Inverse function as a reflection in the line $y = x$, and the notation $f^{-1}(x)$.</p>
SL2.3*	<p>The graph of a function; its equation $y = f(x)$.</p> <p>Creating a sketch from information given or a context, including transferring a graph from screen to paper.</p> <p>Using technology to graph functions including their sums and differences.</p>
SL2.4*	<p>Determine key features of graphs.</p> <p>Finding the point of intersection of two curves or lines using technology.</p>
SL2.5	<p>Modelling with the following functions:</p> <ul style="list-style-type: none"> Linear models: $f(x) = mx + c$ Quadratic models: $f(x) = ax^2 + bx + c; a \neq 0$. Axis of symmetry, vertex, zeros and roots, intercepts on the x-axis and y-axis. Exponential growth and decay models: $f(x) = ka^x + c$ $f(x) = ka^{-x} + c$ (for $a > 0$) $f(x) = ke^{rx} + c$ <p>Equation of a horizontal asymptote.</p> <ul style="list-style-type: none"> Direct/inverse variation: $f(x) = ax^n, n \in \mathbb{Z}$ <p>The y-axis as a vertical asymptote when $n < 0$.</p> <ul style="list-style-type: none"> Cubic models: $f(x) = ax^3 + bx^2 + cx + d$ Sinusoidal models: $f(x) = a \sin(bx) + d, f(x) = a \cos(bx) + d$
SL1.2*	<p>Arithmetic sequences and series.</p> <p>Use of the formulae for the nth term and the sum of the first n terms of the sequence.</p> <p>Use of sigma notation for sums of arithmetic sequences.</p> <p>Applications.</p> <p>Analysis, interpretation and prediction where a model is not perfectly arithmetic in real-life.</p>
SL1.8	Use technology to solve:

	<p>Systems of linear equations in up to 3 variables</p> <p>Polynomial equations</p>
SL2.6	<p>Modelling skills:</p> <ul style="list-style-type: none"> Use the modelling process described in the “mathematical modelling” section to create, fit and use the theoretical models in section SL2.5, and their graphs. <p>Develop and fit the model:</p> <ul style="list-style-type: none"> Given a context recognize and choose an appropriate model and possible parameters. Determine a reasonable domain for a model. Find the parameters of a model. <p>Test and reflect upon the model:</p> <ul style="list-style-type: none"> Comment on the appropriateness and reasonableness of a model. Justify the choice of a particular model, based on the shape of the data, properties of the curve and/or on the context of the situation. <p>Use the model:</p> <ul style="list-style-type: none"> Reading, interpreting and making predictions based on the model.
SL4.4*	<p>Linear correlation of bivariate data.</p> <p>Pearson’s product-moment correlation coefficient, r.</p> <p>Scatter diagrams; lines of best fit, by eye, passing through the mean point.</p> <p>Equation of the regression line of y on x.</p> <p>Use of the equation of the regression line for prediction purposes.</p> <p>Interpret the meaning of the parameters, a and b, in a linear regression $y = ax + b$</p>
SL4.10	<p>Spearman’s rank correlation coefficient, r_s.</p> <p>Awareness of the appropriateness and limitations of Pearson’s product moment correlation coefficient and Spearman’s rank correlation coefficient, and the effect of outliers on each.</p>
AHL2.7	<p>Composite functions in context.</p> <p>The notation $(f \circ g)(x) = f(g(x))$</p> <p>Inverse function f^{-1}, including domain restriction.</p> <p>Finding an inverse function.</p>
AHL2.9	<p>In addition to the models covered in the SL content the HL content extends this to include modelling with the following functions:</p> <ul style="list-style-type: none"> Exponential models to calculate half-life. Natural logarithmic functions: $f(x) = a + b \ln x$ Sinusoidal models: $f(x) = a \sin(b(x - c)) + d$

	<ul style="list-style-type: none"> Logistic models: $f(x) = \frac{L}{1+Ce^{-kx}}$; $L, C, k > 0$ Piecewise models.
AHL4.13	<p>Non-linear regression.</p> <p>Evaluation of least squares regression curves using technology.</p> <p>Sum of square residuals (SS_{res}) as a measure of fit for a model.</p> <p>The coefficient of determination (R^2).</p> <p>Evaluation of R^2 using technology.</p>

**Shows content that is common to both the Mathematics: analysis and approaches and the Mathematics: applications and interpretation courses.*

5 Quantifying uncertainty: probability

Syllabus reference	Syllabus content
SL4.5*	<p>Concepts of trial, outcome, equally likely outcomes, relative frequency, sample space (U) and event.</p> <p>The probability of an event A is $P(A) = \frac{n(A)}{n(U)}$.</p> <p>The complementary events A and A' (not A).</p> <p>Expected number of occurrences.</p>
SL4.6*	<p>Use of Venn diagrams, tree diagrams, sample space diagrams and tables of outcomes to calculate probabilities.</p> <p>Combined events: $P(A \cup B) = P(A) + P(B) - P(A \cap B)$.</p> <p>Mutually exclusive events: $P(A \cap B) = 0$</p> <p>Conditional probability: $P(AB) = \frac{P(A \cap B)}{P(B)}$</p> <p>Independent events: $P(A \cap B) = P(A)P(B)$.</p>
AHL4.19	<p>Transition matrices.</p> <p>Powers of transition matrices.</p> <p>Regular Markov chains.</p> <p>Initial state probability matrices.</p> <p>Calculation of steady state and long-term probabilities by repeated multiplication of the transition matrix or by solving a system of linear equations.</p>

**Shows content that is common to both the Mathematics: analysis and approaches and the Mathematics: applications and interpretation courses.*

6 Modelling relationships with functions: power and polynomial functions

Syllabus reference	Syllabus content
SL2.2*	<p>Concept of a function, domain, range and graph.</p> <p>Function notation, eg $f(x)$, $v(t)$, $C(n)$</p> <p>The concept of a function as a mathematical model.</p> <p>Informal concept that an inverse function reverses or undoes the effect of a function.</p> <p>Inverse function as a reflection in the line $y = x$, and the notation $f^{-1}(x)$.</p>
SL2.3*	<p>The graph of a function; its equation $y = f(x)$.</p> <p>Creating a sketch from information given or a context, including transferring a graph from screen to paper.</p> <p>Using technology to graph functions including their sums and differences.</p>
SL2.4	<p>Determine key features of graphs.</p> <p>Finding the point of intersection of two curves or lines using technology.</p>
SL2.5	<p>Modelling with the following functions:</p> <ul style="list-style-type: none"> Linear models: $f(x) = mx + c$ Quadratic models: $f(x) = ax^2 + bx + c$; $a \neq 0$. Axis of symmetry, vertex, zeros and roots, intercepts on the x-axis and y-axis. Exponential growth and decay models: $f(x) = ka^x + c$ $f(x) = ka^{-x} + c$ (for $a > 0$) $f(x) = ke^{rx} + c$ <p>Equation of a horizontal asymptote.</p> <ul style="list-style-type: none"> Direct/inverse variation: $f(x) = ax^n$, $n \in \mathbb{Z}$ <p>The y-axis as a vertical asymptote when $n < 0$.</p> <ul style="list-style-type: none"> Cubic models: $f(x) = ax^3 + bx^2 + cx + d$ Sinusoidal models: $f(x) = a \sin(bx) + d$, $f(x) = a \cos(bx) + d$
SL2.6	<p>Modelling skills:</p> <ul style="list-style-type: none"> Use the modelling process described in the "mathematical modelling" section to create, fit and use the theoretical models in section SL2.5, and their graphs. <p>Develop and fit the model:</p> <ul style="list-style-type: none"> Given a context recognize and choose an appropriate model and possible parameters. Determine a reasonable domain for a model.

	<ul style="list-style-type: none"> Find the parameters of a model. <p>Test and reflect upon the model:</p> <ul style="list-style-type: none"> Comment on the appropriateness and reasonableness of a model. Justify the choice of a particular model, based on the shape of the data, properties of the curve and/or on the context of the situation. <p>Use the model:</p> <ul style="list-style-type: none"> Reading, interpreting and making predictions based on the model.
SL1.8	<p>Use technology to solve:</p> <ul style="list-style-type: none"> Systems of linear equations in up to 3 variables Polynomial equations
AHL2.7	<p>Composite functions in context.</p> <p>The notation $(f \circ g)(x) = f(g(x))$</p> <p>Inverse function f^{-1}, including domain restriction.</p> <p>Finding an inverse function.</p>
AHL2.8	<p>Transformations of graphs.</p> <p>Translations: $y = f(x) + b$; $y = f(x - a)$</p> <p>Reflections: in the x-axis $y = -f(x)$, and in the y-axis $y = f(-x)$</p> <p>Vertical stretch with scale factor p: $y = pf(x)$</p> <p>Horizontal stretch with scale factor $\frac{1}{q}$: $y = f(qx)$</p> <p>Composite transformations.</p>
AHL2.9	<p>In addition to the models covered in the SL content the HL content extends this to include modelling with the following functions:</p> <ul style="list-style-type: none"> Exponential models to calculate half-life. Natural logarithmic functions: $f(x) = a + b \ln x$ Sinusoidal models: $f(x) = a \sin(b(x - c)) + d$ Logistic models: $f(x) = \frac{L}{1 + Ce^{-kx}}$; $L, C, k > 0$ Piecewise models.

**Shows content that is common to both the Mathematics: analysis and approaches and the Mathematics: applications and interpretation courses.*

7 Modelling rates of change: exponential and logarithmic functions

Syllabus reference	Syllabus content
SL1.3*	<p>Geometric sequences and series</p> <p>Use of the formulae for the nth term and the sum of the first n terms of the sequence.</p> <p>Use of sigma notation for the sums of geometric sequences.</p> <p>Applications.</p>
SL1.4*	<p>Financial applications of geometric sequences and series:</p> <ul style="list-style-type: none"> Compound interest Annual depreciation
SL1.5*	<p>Laws of exponents with integer exponents.</p> <p>Introduction to logarithms with base 10 and e.</p> <p>Numerical evaluation of logarithms using technology.</p>
SL1.7	Amortization and annuities using technology.
SL2.2*	<p>Concept of a function, domain, range and graph.</p> <p>Function notation, eg $f(x)$, $v(t)$, $C(n)$</p> <p>The concept of a function as a mathematical model.</p> <p>Informal concept that an inverse function reverses or undoes the effect of a function.</p> <p>Inverse function as a reflection in the line $y = x$, and the notation $f^{-1}(x)$.</p>
SL2.3*	<p>The graph of a function; its equation $y = f(x)$.</p> <p>Creating a sketch from information given or a context, including transferring a graph from screen to paper.</p> <p>Using technology to graph functions including their sums and differences.</p>
SL2.4	<p>Determine key features of graphs.</p> <p>Finding the point of intersection of two curves or lines using technology.</p>
SL2.5	<p>Modelling with the following functions:</p> <ul style="list-style-type: none"> Linear models: $f(x) = mx + c$ Quadratic models: $f(x) = ax^2 + bx + c$; $a \neq 0$. Axis of symmetry, vertex, zeros and roots, intercepts on the x-axis and y-axis. Exponential growth and decay models: $f(x) = ka^x + c$ $f(x) = ka^{-x} + c$ (for $a > 0$) $f(x) = ke^{rx} + c$

	<p>Equation of a horizontal asymptote.</p> <ul style="list-style-type: none"> Direct/inverse variation: $f(x) = ax^n, n \in \mathbb{Z}$ <p>The y-axis as a vertical asymptote when $n < 0$.</p> <ul style="list-style-type: none"> Cubic models: $f(x) = ax^3 + bx^2 + cx + d$ Sinusoidal models: $f(x) = a \sin(bx) + d, f(x) = a \cos(bx) + d$
SL2.6	<p>Modelling skills:</p> <ul style="list-style-type: none"> Use the modelling process described in the “mathematical modelling” section to create, fit and use the theoretical models in section SL2.5, and their graphs. <p>Develop and fit the model:</p> <ul style="list-style-type: none"> Given a context recognize and choose an appropriate model and possible parameters. Determine a reasonable domain for a model. Find the parameters of a model. <p>Test and reflect upon the model:</p> <ul style="list-style-type: none"> Comment on the appropriateness and reasonableness of a model. Justify the choice of a particular model, based on the shape of the data, properties of the curve and/or on the context of the situation. <p>Use the model:</p> <ul style="list-style-type: none"> Reading, interpreting and making predictions based on the model.
AHL1.9	<p>Laws of logarithms:</p> $\log_a xy = \log_a x + \log_a y$ $\log_a \frac{x}{y} = \log_a x - \log_a y$ $\log_a x^m = m \log_a x$ <p>for $a, x, y > 0$</p>
AHL1.11	The sum of infinite geometric sequences.
AHL2.10	<p>Scaling very large or small numbers using logarithms.</p> <p>Linearizing data using logarithms to determine if the data has an exponential or a power relationship using best fit straight lines to determine parameters.</p> <p>Interpretation of log-log and semi-log graphs.</p>
AHL2.7	<p>Composite functions in context.</p> <p>The notation $(f \circ g)(x) = f(g(x))$</p> <p>Inverse function f^{-1}, including domain restriction.</p> <p>Finding an inverse function.</p>
AHL2.8	<p>Transformations of graphs.</p> <p>Translations: $y = f(x) + b; y = f(x - a)$</p> <p>Reflections: in the x-axis $y = -f(x)$, and in the y-axis $y = f(-x)$</p>

	<p>Vertical stretch with scale factor p: $y = pf(x)$</p> <p>Horizontal stretch with scale factor $\frac{1}{q}$: $y = f(qx)$</p> <p>Composite transformations.</p>
AHL 2.9	<p>Exponential models to calculate half-life.</p> <p>Natural logarithmic models: $f(x) = a + b \ln x$</p> <p>Sinusoidal models: $f(x) = a \sin(b(x - c)) + d$</p> <p>Logistic models: $f(x) = \frac{L}{1 + Ce^{-kx}}$; $L, C, e > 0$</p> <p>Piecewise models.</p>

**Shows content that is common to both the Mathematics: analysis and approaches and the Mathematics: applications and interpretation courses.*

8 Modelling periodic phenomena: trigonometric functions and complex numbers

Syllabus reference	Syllabus content
SL2.5	<p>Modelling with the following functions:</p> <ul style="list-style-type: none"> Linear models: $f(x) = mx + c$ Quadratic models: $f(x) = ax^2 + bx + c$; $a \neq 0$. Axis of symmetry, vertex, zeros and roots, intercepts on the x-axis and y-axis. Exponential growth and decay models: $f(x) = ka^x + c$ $f(x) = ka^{-x} + c$ (for $a > 0$) $f(x) = ke^{rx} + c$ <p>Equation of a horizontal asymptote.</p> Direct/inverse variation: $f(x) = ax^n$, $n \in \mathbb{Z}$ The y-axis as a vertical asymptote when $n < 0$. Cubic models: $f(x) = ax^3 + bx^2 + cx + d$ Sinusoidal models: $f(x) = a \sin(bx) + d$, $f(x) = a \cos(bx) + d$
SL2.6	<p>Modelling skills:</p> <ul style="list-style-type: none"> Use the modelling process described in the “mathematical modelling” section to create, fit and use the theoretical models in section SL2.5, and their graphs. Develop and fit the model: Given a context recognize and choose an appropriate model and possible parameters. Determine a reasonable domain for a model. Find the parameters of a model. <p>Test and reflect upon the model:</p> <ul style="list-style-type: none"> Comment on the appropriateness and reasonableness of a model. Justify the choice of a particular model, based on the shape of the data, properties of the curve and/or on the context of the situation. <p>Use the model:</p> <p>Reading, interpreting and making predictions based on the model.</p>
AHL2.9	<p>In addition to the models covered in the SL content the HL content extends this to include modelling with the following functions:</p> <ul style="list-style-type: none"> Exponential models to calculate half-life. Natural logarithmic functions: $f(x) = a + b \ln x$ Sinusoidal models: $f(x) = a \sin(b(x - c)) + d$

	<ul style="list-style-type: none"> Logistic models: $f(x) = \frac{L}{1+Ce^{-kx}}$; $L, C, k > 0$ Piecewise models.
AHL3.8	<p>The definitions of $\cos \theta$ and $\sin \theta$ in terms of the unit circle.</p> <p>The Pythagorean identity: $\cos^2 \theta + \sin^2 \theta = 1$</p> <p>Definition of $\tan \theta$ as $\frac{\sin \theta}{\cos \theta}$</p> <p>Extension of the sine rule to the ambiguous case.</p> <p>Graphical methods of solving trigonometric equations in a finite interval.</p>
AHL2.8	<p>Transformations of graphs.</p> <p>Translations: $y = f(x) + b$; $y = f(x - a)$</p> <p>Reflections: in the x-axis $y = -f(x)$, and in the y-axis $y = f(-x)$</p> <p>Vertical stretch with scale factor p: $y = pf(x)$</p> <p>Horizontal stretch with scale factor $\frac{1}{q}$: $y = f(qx)$</p> <p>Composite transformations.</p>
AHL1.12	<p>Complex numbers: the number i such that $i^2 = -1$.</p> <p>Cartesian form: $z = a + bi$; the terms real part, imaginary part, conjugate, modulus and argument.</p> <p>Calculate sums, differences, products, quotients, by hand and with technology.</p> <p>Calculating powers of complex numbers, in Cartesian form, with technology.</p> <p>The complex plane.</p> <p>Complex numbers as solutions to quadratic equations of the form $ax^2 + bx + c = 0$, $a \neq 0$, with real coefficients where $b^2 - 4ac < 0$</p>
AHL1.13	<p>Modulus–argument (polar) form: $z = r(\cos \theta + i \sin \theta) = r \operatorname{cis} \theta$</p> <p>Exponential form: $z = re^{i\theta}$</p> <p>Conversion between Cartesian, polar and exponential forms, by hand and with technology.</p> <p>Calculate products, quotients and integer powers in polar or exponential forms.</p> <p>Adding sinusoidal functions with the same frequencies but different phase shift angles.</p> <p>Geometric interpretation of complex numbers</p>
AHL3.7	<p>The definition of a radian and conversion between degrees and radians.</p> <p>Using radians to calculate area of sector, length of arc.</p>

9 Modelling with matrices: storing and analysing data

Syllabus reference	Syllabus content
AHL1.14	<p>Definition of a matrix: the terms element, row, column and order for $m \times n$ matrices.</p> <p>Algebra of matrices: equality; addition; subtraction; multiplication by a scalar for $m \times n$ matrices</p> <p>Multiplication of matrices.</p> <p>Properties of matrix multiplication: associativity, distributivity and non-commutativity.</p> <p>Identity and zero matrices.</p> <p>Determinants and inverses of $n \times n$ matrices with technology, and by hand for 2×2 matrices.</p> <p>Awareness that a system of linear equations can be written in the form $Ax = b$.</p> <p>Solution of the systems of equations using inverse matrix.</p>
AHL1.15	<p>Eigenvalues and eigenvectors.</p> <p>Characteristic polynomial of 2×2 matrices.</p> <p>Diagonalization of 2×2 matrices (restricted to the case where there are distinct real eigenvalues).</p> <p>Applications to powers of 2×2 matrices.</p>
AHL3.9	<p>Geometric transformations of points in two dimensions using matrices: reflections, horizontal and vertical stretches, enlargements, translations and rotations.</p> <p>Compositions of the above transformations.</p> <p>Geometric interpretation of the determinant of a transformation matrix.</p>

10 Analyzing rates of change: differential calculus

Syllabus reference	Syllabus content
SL5.1*	Introduction to the concept of a limit. Derivative interpreted as gradient function and as rate of change.
SL5.2*	Increasing and decreasing functions. Graphical interpretation of $f'(x) > 0$, $f'(x) = 0$, $f'(x) < 0$.
SL5.3*	Derivative of $f(x) = ax^n$ is $f'(x) = anx^{n-1}$, $n \in \mathbb{Z}$ The derivative of functions of the form $f(x) = ax^n + bx^{n-1} + \dots$, where all exponents are integers.
SL5.4*	Tangents and normals at a given point, and their equations.
SL5.6	Values of x where the gradient of a curve is zero. Solution of $f'(x) = 0$. Local maximum and minimum points.
SL5.7	Optimisation problems in context.
AHL5.9	The derivatives of $\sin x$, $\cos x$, $\tan x$, e^x , $\ln x$, x^n where $n \in \mathbb{Q}$. The chain rule, product rule and quotient rules. Related rates of change.
AHL5.10	The second derivative. Use of second derivative test to distinguish between a maximum and a minimum point.
AHL5.13	Kinematic problems involving displacement s , velocity v and acceleration a .

**Shows content that is common to both the Mathematics: analysis and approaches and the Mathematics: applications and interpretation courses.*

11 Approximating irregular spaces: integration and differential equations

Syllabus reference	Syllabus content
SL5.5*	<p>Introduction to integration as anti-differentiation of functions of the form $f(x) = ax^n + bx^{n-1} + \dots$, where $n \in \mathbb{Z}, n \neq -1$</p> <p>Definite integrals using technology.</p> <p>Anti-differentiation with a boundary condition to determine the constant term.</p> <p>Areas between a curve $y = f(x)$ and the x-axis, where $f(x) > 0$.</p>
SL5.8	Approximating areas using the trapezoidal rule.
AHL5.11	<p>Definite and indefinite integration of x^n where $n \in \mathbb{Q}$, including $n = -1$, $\sin x$, $\cos x$, $\frac{1}{\cos^2 x}$ and e^x.</p> <p>Integration by inspection, or substitution of the form $\int f(g(x))g'(x)dx$.</p>
AHL5.12	<p>Area of the region enclosed by a curve and the x or y-axes in a given interval.</p> <p>Volumes of revolution about the x-axis or y-axis.</p>
AHL5.13	Kinematic problems involving displacement s , velocity v and acceleration a .
AHL5.14	<p>Setting up a model/differential equation from a context.</p> <p>Solving by separation of variables.</p>
AHL5.15	Slope fields and their diagrams.
AHL5.16	<p>Euler's method for finding the approximate solution to first order differential equations.</p> <p>Numerical solution of $\frac{dy}{dx} = f(x, y)$.</p> <p>Numerical solution of the coupled system $\frac{dx}{dt} = f_1(x, y, t)$ and $\frac{dy}{dt} = f_2(x, y, t)$.</p>

**Shows content that is common to both the Mathematics: analysis and approaches and the Mathematics: applications and interpretation courses.*

12 Modelling motion and change in 2D and 3D: vectors and differential equations

Syllabus reference	Syllabus content
AHL3.12	<p>Vector applications to kinematics.</p> <p>Modelling linear motion with constant velocity in two and three dimensions.</p> <p>Motion with variable velocity in two dimensions.</p>
AHL3.13	<p>Definition and calculation of the scalar product of two vectors.</p> <p>The angle between two vectors; the acute angle between two lines.</p> <p>Definition and calculation of the vector product of two vectors.</p> <p>Geometric interpretation of $\mathbf{v} \times \mathbf{w}$.</p> <p>Components of vectors.</p>
AHL5.16	<p>Euler's method for finding the approximate solution to first order differential equations.</p> <p>Numerical solution of $\frac{dy}{dx} = f(x, y)$.</p> <p>Numerical solution of the coupled system $\frac{dx}{dt} = f_1(x, y, t)$ and $\frac{dy}{dt} = f_2(x, y, t)$.</p>
AHL5.17	<p>Phase portrait for the solutions of coupled differential equations of the form:</p> $\frac{dx}{dt} = ax + by$ $\frac{dy}{dt} = cx + dy$ <p>Qualitative analysis of future paths for distinct, real, complex and imaginary eigenvalues.</p> <p>Sketching trajectories and using phase portraits to identify key features such as equilibrium points, stable populations and saddle points.</p>
AHL5.18	<p>Solutions of $\frac{d^2x}{dt^2} = f(x, \frac{dx}{dt}, t)$ by Euler's method.</p>

**Shows content that is common to both the Mathematics: analysis and approaches and the Mathematics: applications and interpretation courses.*

13 Representing multiple outcomes: random variables and probability distributions

Syllabus reference	Syllabus content
SL4.2*	<p>Presentation of data (discrete and continuous): frequency distributions (tables).</p> <p>Histograms.</p> <p>Cumulative frequency; cumulative frequency graphs; use to find median, quartiles, percentiles, range and interquartile range (IQR).</p> <p>Production and understanding of box and whisker diagrams.</p>
SL4.7*	<p>Concept of discrete random variables and their probability distributions.</p> <p>Expected value (mean), $E(X)$ for discrete data.</p> <p>Applications.</p>
SL4.8*	<p>Binomial distribution.</p> <p>Mean and variance of the binomial distribution.</p>
SL4.9*	<p>The normal distribution and curve.</p> <p>Properties of the normal distribution.</p> <p>Diagrammatic representation.</p> <p>Normal probability calculations.</p> <p>Inverse normal calculations.</p>
AHL4.17	<p>Poisson distribution, its mean and variance.</p> <p>Sum of two independent Poisson distributions has a Poisson distribution.</p>
AHL4.14	<p>Linear transformation of a single random variable.</p> <p>Expected value of linear combinations of n random variables.</p> <p>Variance of linear combinations of n independent random variables.</p> <p>\bar{x} as an unbiased estimate of μ.</p> <p>s_{n-1}^2 as an unbiased estimate of σ^2.</p>
AHL4.15	<p>A linear combination of n independent normal random variables is normally distributed. In particular,</p> $X \sim N(\mu, \sigma^2) \Rightarrow \bar{X} \sim N\left(\mu, \frac{\sigma^2}{n}\right)$ <p>Central limit theorem.</p>

**Shows content that is common to both the Mathematics: analysis and approaches and the Mathematics: applications and interpretation courses.*

14 Testing for validity: Spearman's, hypothesis testing and χ^2 test for independence

Syllabus reference	Syllabus content
SL4.11	<p>Formulation of null and alternative hypotheses, H_0 and H_1.</p> <p>Significance levels.</p> <p>p-values.</p> <p>Expected and observed frequencies.</p> <p>The χ^2 test for independence: contingency tables; degrees of freedom, critical value.</p> <p>The χ^2 goodness of fit test.</p>
SL4.10	<p>Spearman's rank correlation coefficient, r_s.</p> <p>Awareness of the appropriateness and limitations of Pearson's product-moment correlation coefficient and Spearman's rank correlation coefficient, and the effect of outliers on each.</p>
AHL4.12	<p>Design of valid data collection methods, such as surveys and questionnaires.</p> <p>Selecting relevant variables from many variables.</p> <p>Choosing relevant and appropriate data to analyse.</p> <p>Categorising numerical data in a χ^2 table and justifying the choice of categorisation.</p> <p>Choosing an appropriate number of degrees of freedom when estimating parameters from data when carrying out the χ^2 goodness of fit test.</p> <p>Definition of reliability and validity. Reliability tests. Validity tests.</p>
AHL4.14	<p>Linear transformation of a single random variable.</p> <p>Expected value of linear combinations of n random variables.</p> <p>Variance of linear combinations of n independent random variables.</p> <p>\bar{x} as an unbiased estimate of μ.</p> <p>s_{n-1}^2 as an unbiased estimate of σ^2.</p>
AHL4.16	Confidence intervals for the mean of a normal population
AHL4.18	<p>Critical values and critical regions.</p> <p>Test for population mean for normal distribution.</p> <p>Test for proportion using binomial distribution.</p> <p>Test for population mean using Poisson distribution.</p> <p>Use of technology to test the hypothesis that the population product moment correlation coefficient (ρ) is 0 for bivariate normal distributions.</p> <p>Type I and II errors including calculations of their probabilities.</p>

15 Optimizing complex networks: graph theory

Syllabus reference	Syllabus content
AHL3.14	<p>Graph theory: Graphs, vertices, edges, adjacent vertices, adjacent edges. Degree of a vertex.</p> <p>Simple graphs; complete graphs; weighted graphs.</p> <p>Directed graphs; in degree and out degree of a directed graph.</p> <p>Subgraphs; trees.</p>
AHL3.15	<p>Adjacency matrices.</p> <p>Walks.</p> <p>Number of k-length walks (or less than k-length walks) between two vertices.</p> <p>Weighted adjacency tables.</p> <p>Construction of the transition matrix for a strongly connected, undirected or directed graph.</p>
AHL3.16	<p>Tree and cycle algorithms with undirected graphs.</p> <p>Walks, trails, paths, circuits, cycles.</p> <p>Eulerian trails and circuits.</p> <p>Hamiltonian paths and cycles.</p> <p>Minimum spanning tree (MST) graph algorithms:</p> <ul style="list-style-type: none"> • Kruskal's and Prim's algorithms for finding minimum spanning trees. • Chinese postman problem & algorithm for solution, to determine the shortest route around a weighted graph with up to 4 odd vertices, going along each edge at least once. • Travelling salesman problem to determine the Hamiltonian cycle of least weight in a weighted complete graph. • Nearest neighbour algorithm for determining an upper bound for the travelling salesman problem. • Deleted vertex algorithm for determining a lower bound for the travelling salesman problem.

**Shows content that is common to both the Mathematics: analysis and approaches and the Mathematics: applications and interpretation courses.*
